

## Integration Steps for Native Application with Netcore SDK

Before performing Application changes, Follow these two steps:-

**Step 1:** Get GCM sender Id and Api Key from Google Developer console

**Step 2:** Get App Id and Smartech SDK from Smartech Panel

Now Follow Below steps to integrating Native application with Netcore SDK for push notification

1. Copy permission, uses permission, receiver in AndroidManifest.xml

Below code paste above or below application tag:

```
<uses-permission android:name="${applicationId}.permission.C2D_MESSAGE" />
<uses-permission android:name="android.permission.ACCESS_COARSE_LOCATION" />
<uses-permission android:name="android.permission.INTERNET" />
<uses-permission android:name="android.permission.WAKE_LOCK" />
<uses-permission android:name="android.permission.SYSTEM_ALERT_WINDOW" />
<uses-permission android:name="android.permission.ACCESS_NETWORK_STATE" />
<uses-permission android:name="android.permission.SEND_SMS"/>
<uses-permission android:name="android.permission.RECEIVE_SMS"/>

<permission android:name="<package name>.permission.C2D_MESSAGE"
android:protectionLevel="signature" />
```

Below code paste in application tag:

```
<meta-data
    android:name="com.netcore.sdk.ApplicationId"
    android:value="<AppId>" />
<!-- GCM TO BE ADDED By CUSTOMER IN MANIFEST -->
<receiver
    android:name="com.google.android.gms.gcm.GcmReceiver"
    android:exported="true"
    android:permission="com.google.android.c2dm.permission.SEND">
    <intent-filter>
        <action android:name="com.google.android.c2dm.intent.RECEIVE"/>
        <action android:name="com.google.android.c2dm.intent.REGISTRATION"/>
    </intent-filter>
</receiver>
<!-- GCM -->
```

2. Add Netcore SDK (i.e. aar file) in libs folder

3. Add below code in MainActivity.java for registration of application through GCM and generate Token for push notification

Add import files in Launcher page

```
import com.netcore.lib.ActivityLifecycleCallBack;
import com.netcore.lib.NetcorePrefs;
import com.netcore.lib.NetcorePush;
import com.netcore.lib.NetcoreSDK;
```

Define config variable as

```
NetcoreSDK.Config config;  
public long sessionId;
```

Then paste below code in onCreate method:

```
sessionId = System.currentTimeMillis();  
  
config = new NetcoreSDK.Config()  
    .setSenderId( "<sender Id>" );  
  
config.setActivityClass( MainActivity.class ).  
    setSmallIcon( R.drawable.ic_launcher );  
config.setNetcorePush( new NetcorePush() {  
    @Override  
    public void onDataReceived( String json ) {  
        NetcoreSDK.registerAppEvent( MainActivity.this, NetcorePrefs.PUSH_DELIVERED,  
        System.currentTimeMillis(), sessionId, identity, "", config );  
    }  
});  
//Registers your app on Netcore Server  
try {  
    NetcoreSDK.register( this, config, System.currentTimeMillis(), sessionId, identity,  
    NetcorePrefs.SIGNUP_REGISTER );  
}  
catch ( NetcoreSDK.MissingPermissionException e ) {  
    e.printStackTrace();  
}
```

**Note:** identity as "" or logged in username

4. Follow below instruction for modification of build.gradle:

Add in repositories below code:

```
flatDir { dirs 'libs' }
```

Add in dependencies below code:

```
compile(name:'SmartechSDK', ext:'aar')
```

Add in dependencies for Google play services of GMS:

```
compile "com.google.android.gms:play-services:7.5.+"
```

5. **For Activity Tracking**, place below code when Activity performed

```
NetcoreSDK.registerAppEvent( context, EventId, sessionId, System.currentTimeMillis(), identity,  
"", config );
```

**Note:** identity as "" or logged in username

6. **For InApp Engage**, Add Below Code in OnCreate method of Launcher Activity:-

```
ActivityLifecycleCallBack.register(getApplication());
```

7. Go to **tools->android** and click on **sync project with gradle files**

8. Run the application
